

ROTEM GOTLIEB

PRODUCT DESIGNER & DESIGN ENGINEER

San Jose, CA · 408-887-3289 · rotemgotlieb.com · rotem.gotlieb@gmail.com

SUMMARY

Product designer and design engineer who ships the whole loop: research, design, production code. Recently at Surface Labs (YC), where I designed 17 marketing pages in Claude and shipped them to the production repo as reviewed pull requests. Previously built the LexisNexis token pipeline that cut palette updates from a full day to 30 seconds. Two self-built AI products live. Full operating model documented at rotemgotlieb.com/process.

PROFESSIONAL EXPERIENCE

Surface Labs (YC) Jun 2026 — Present

Design Engineer (Contract)

- Designed 17 marketing pages in Claude and shipped them to the production Next.js repo as reviewed pull requests; 13+ live on withsurface.com, the rest in review.
- Built the page template system: every new page is a small content file rendered by shared on-brand templates, with a CI token check that blocks off-brand styles before merge.
- Built a Remotion motion system that renders on-brand product films from single data files across wide, square, and vertical formats, with code-synthesized, beat-synced sound.
- Kept a healthy main branch: reverted six premature merges and re-shipped the same work as consolidated, reviewed pull requests.

LexisNexis Risk Solutions (ThreatMetrix) Dec 2024 — Jul 2025

Product Design & Research

- Built a Figma-to-Storybook token pipeline that reduced palette updates from a full day with 3 people to 30 seconds with 1 designer; now used across two enterprise design systems.
- Created 180+ WCAG-tested color tokens with semantic aliases mapped to production React components, eliminating naming drift between Figma, Storybook, and code.
- Ran 8 user interviews with fraud analysts; tagged insights in Dovetail and produced the report that shaped the Custom Layouts product roadmap.
- Designed and tested 3 prototype iterations in 2 weeks for a customizable dashboard, validated with moderated user testing before any production code was written.
- Presented research and design updates to PMs, senior designers, and engineering leads across multiple product teams.

Redis Jul 2022 — Sept 2022

Product Design Intern (Contract)

- Audited and streamlined the e-book download flow; reduced steps and clarified CTAs.
- Designed a refreshed icon set used on the main landing page.
- Partnered with developers and marketing on handoff specs and usage documentation.

GoteFigure (Personal E-commerce) Mar 2020 — Present

Founder & Product Designer

- Built the brand end to end: identity, illustration, storefront UX; 200+ pieces sold in Q1.
- Built a lightweight design system that takes ideas from sketch to listed product in under three hours.

SELECTED PROJECTS

Pulse — AI UX Intelligence Dashboard (Live, 2026)

Self-built AI-native dashboard that X-rays live pages, pins detected UX issues onto the UI, and translates behavioral data into designer vocabulary. Next.js, Tailwind, Framer Motion, Claude Code. *Live via rotemgotlieb.com/work/pulse*

Ghost — Design System Reality Scanner (Live, 2026)

Self-built tool that compares the Figma source of truth against production and surfaces every deviation visually, with an AI Fix Flow connected to the Figma API. Next.js, Tailwind, Claude Code. *Live: ghost.rotemgotlieb.com*

SKILLS

Code	HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS, Remotion
AI Workflow	Claude Code, Claude Design, strategist/executor pattern, adversarial review, design-to-production pipelines
Design	Product Design, Interaction Design, Design Systems, Design Tokens, Motion Design, Accessibility (WCAG)
Research	User Interviews, Usability Testing, Heuristic Evaluation, A/B Testing
Tools	Figma, Storybook, Framer Motion, FigJam

EDUCATION

University of California, San Diego — B.A., Interdisciplinary Computing & the Arts Dec 2024

ADDITIONAL

Languages: English, Hebrew

Side projects: Gote Golf VR (Unity/OpenXR), Rotems Adventures YouTube channel (3.8K subs), GoteFigure daily art channel

Portfolio: rotemgotlieb.com — hand-coded vanilla HTML/CSS/JS; every animation built and verified in code; operating model at [/process](https://rotemgotlieb.com/process)
